Microsoft RMS SDK for Windows Store Cracked 2022 Latest Version is the official software development kit for building applications that consume Microsoft rights management services from Windows Store. This SDK is designed to support both multiple client platforms (Windows Runtime, Windows Phone and Silverlight) and multiple APIs in the Windows Defender content protection API (CPA). This Windows Runtime SDK for Windows Store gives developers a set of tools to work with content protection features in Windows Store and to integrate the AADRM client. At this point, the SDK will be sufficient to interact with the AADRM CPA.
