You will learn more of the advanced tools that we use in the empirical study of economics. It will have three hours of live lectures with a total of 15 hours of self-study. Let's start: Why Do You Want to Learn Statistics? Do you want to be a better investor? We all want to invest better in the financial market. We may start with buying a house, but we are sure that we will need better ways of investments for retirement. In this course, we will study these concepts of market, security, performance, risk, measurement, modeling, forecasting, trading, and diversification. We will also study and use the mathematical tools and the numerical tools to evaluate the risks of different investments. How to Choose an Investment? When it comes to investing, most of us make wrong decisions. We invest in the wrong securities, in the wrong periods, we select the wrong investments for our goals, and we buy the wrong portfolio. So, you may want to study this and do better. If you are an investor, you will benefit from this course. If you are not an investor, you will get a better understanding of how investments are made and what are the best investments in the market. How to Choose a Portfolio? A lot of us do not know how to select a portfolio in the market. Some of us think that we have to invest in all asset classes, and some of us think that we have to make choices based on the risk-return characteristics of the different asset classes. In this course, we will start with choosing a portfolio, and how do we select the right portfolio. How to Select a Mutual Fund? Mutual funds are one of the most common investments, and we want to know how to select a mutual fund. If you are a mutual fund manager, then you know the importance of your job. If you are not a fund manager, you may also benefit from this course. How to Evaluate an Asset? Have you ever heard about a technical analysis of stocks? You may also have heard about the technical analysis of bonds and the stocks. You may want to learn more about it, and you will be able to compare it with fundamental analysis. What is Fundamental Analysis? Fundamental analysis is a part of security selection that uses various characteristics of the security. A fundamental analyst will evaluate the quality of the company before buying any security. You may need 82157476af
